Project Idea Description

02/08

MoneyBrew will be a mobile application designed to help busy individuals and families manage their personal finances in a simple and interactive way.

With our product, users will be able to track their income and expenses, control their spending, monitor financial progress, set and achieve savings goals, receive personalized financial tips, consult AI-powered assistance, explore the world of investments, among other features.

Our app will combine in one single place everything one needs to take control of their finances. As easy as taking a sip of coffee.

Questionnaire Highlights

04/08

User profiling

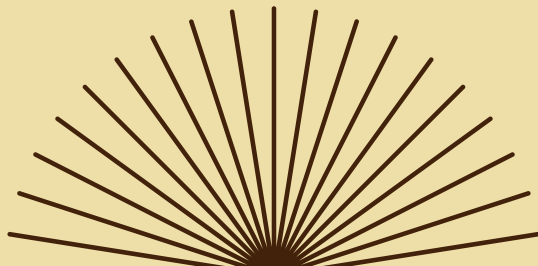

What is your age range? **78,9% - 18 to 25**
What is your educational level? **44,7% - BSc degree**
What is your current professional situation? **36,8% - Student (not working)**
How many people comprise your household? **36,8% - 4**
What is the total income of your household? **21,1% - 2000 to 2999**

Current situation

Do you currently own any financial investments? **47,4% - No, but would like to invest**
How do you classify the degree of involvement in your financial investments? **56,3% - Have a limited knowledge**
How often do you monitor your expenses? **36,8% - Weekly**
In the last year, approximately, how often were you able to save? **34,2% - Always**
Which of the following types of expense tracks have you used? **Notebook, Excel, never registered**
Which of the following challenges do you consider the most significant obstacle to controlling your financial management? **Low motivation, impulsive and unpredictable spendings**
How often do you use a financial management application? **55,3% - Never**

Potential new solution

What interests you the most in those apps? **Security and privacy, visual appeal and simplicity**
Which of the following features do you find most appealing in financial management apps? **Budgeting and expenses tracking**
Which of the following innovations do you find most exciting for a potential new financial management app? **Financial literacy, expenses management and chatbot**

People

Individuals aged between 18 and 35, single, holding either a high school diploma or a Bachelor's degree, and currently studying, working, or doing both.

Their households consist of an average of four people, including two dependents, with a total monthly income ranging between 1500 and 2999€.

Activities

Most participants typically create a monthly spending budget and have followed it during most months of the past year; however, they generally were not able to save money consistently.

There is an overall interest in investing: most participants already invest or, if not, wish to do so in the future.

Context

Respondents indicate that a lack of time or motivation, failure to track expenses, and a hard time saving or predicting regular expenses are the reasons why they struggle to manage their finances.

Despite having interest in financial investments, they admit to not having extensive knowledge in that field.

Technologies

Physical or digital notebooks and Excel sheets are the most common methods for tracking expenses, although a considerable percentage of surveyed people never did that task at all.

Most participants do not currently use a financial management app but recognize expense tracking, budgeting, and consumption pattern analysis as relevant features in the currently available options.

Bernardo Martins

Real Estate Agent
41 years old

- Setúbal, Portugal
- Real Estate Agent at Prime Properties
- Bachelor's in Business Administration
- Married
- Lives with his wife and teenage son, and occasionally supports his parents
- Medium to upper-middle income, commission-based

Background & Lifestyle

Bernardo is a successful real estate agent in Setúbal, known for his strong sales skills but challenged by the ups and downs of commission-based income. He keeps a close eye on the market and world events, and likes to unwind with true crime series and podcasts. He tries to keep track of commissions and expenses on paper or Excel, but his financial choices—often shaped by friends’ advice—are usually more reactive than strategic.

🎯 Goals & Motivations

- ✔ Monitor commission earnings from multiple property sales
- ✔ Prepare for his son’s university education and his own retirement
- ✔ Generate monthly financial reports for tax purposes
- ✔ Gain better understanding of investment opportunities

😞 Frustrations & Pain Points

- ✖ Difficulty reconciling payments from different clients
- ✖ Manual spreadsheet tracking is time-consuming and error-prone
- ✖ Limited investment knowledge, relies on intuition or friends’ advice
- ✖ Struggles to plan long-term budgets due to unpredictable earnings

“My income isn’t always predictable — I just need a simple way to understand my spending and build savings for the future.”

📈 Behavioral Patterns

- ➔ Often forgets to check financial status
- ➔ Prefers visual data representation over text
- ➔ Needs quick access during client meetings

📱 Preferences

- ★ Simple, intuitive interface with minimal clicks
- ★ Mobile notifications for payment milestones
- ★ Integration with banking apps and services
- ★ Exportable reports for accountant collaboration
- ★ Interested in educational tips about saving and investment

Activity Scenario

Bernardo comes home after a long day of work and, after having dinner with his wife and son, begins winding down for the day. Then, he **receives a notification** from the **MoneyBrew app**, suggesting him a new true crime Netflix series that has just arrived in their repertoire. The app has **analyzed** his Netflix consumption patterns and, two months ago, **recommended** him to cancel his subscription because it believed no new series would capture his interest during that time.

Excited by the app's summary of the new series, Bernardo decides to **repurchase** a Netflix subscription. After a hard day's work, he feels this is the perfect way to relax before bed. Thanks to the previous two-month cancellation, he **saved** about 20 €.
